

WORKFLOWS

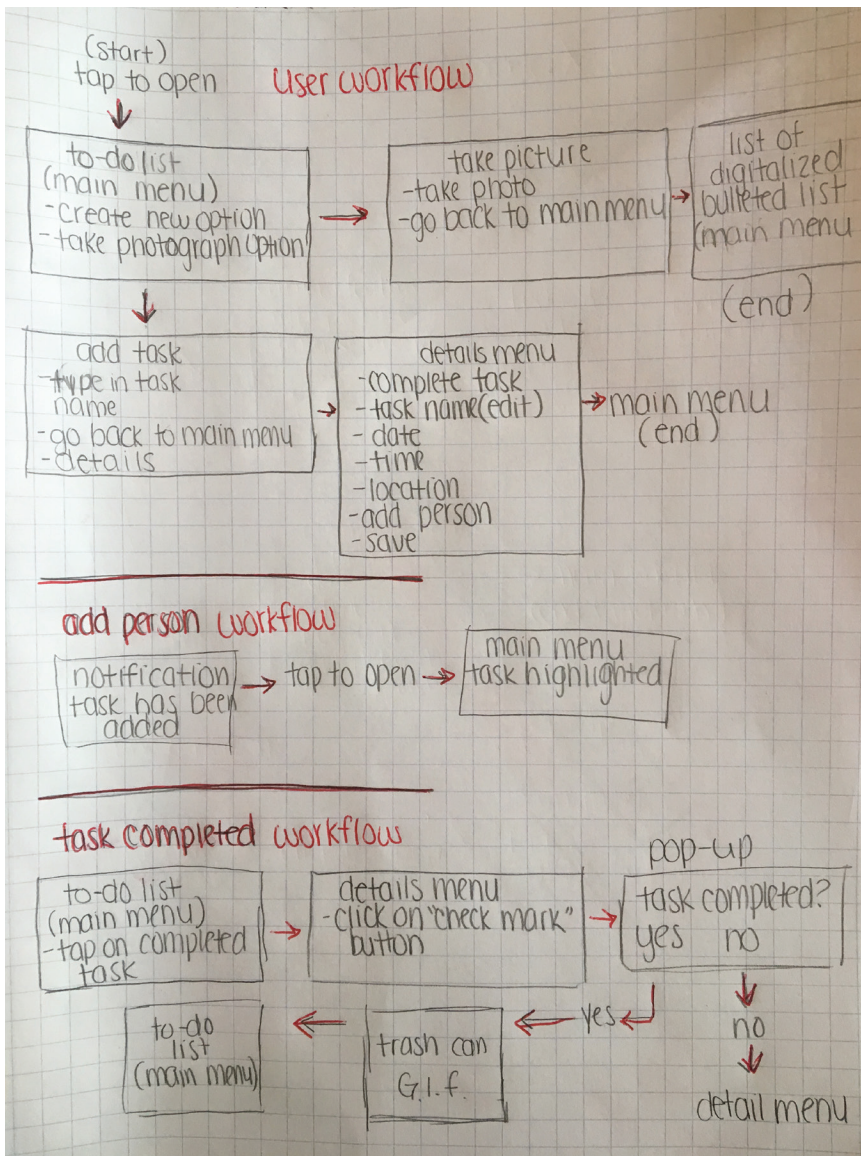

INTRODUCTION:

ReminderX will be adding three features to it's app.

Location: You can add location to your task so when you are in the area of your task, ReminderX will alert you.

Share: You can share your task to a friend or other user.

Photograph your list: Use the list feature to take a photograph of your hand written notes and it will digitalize it to your to-do list

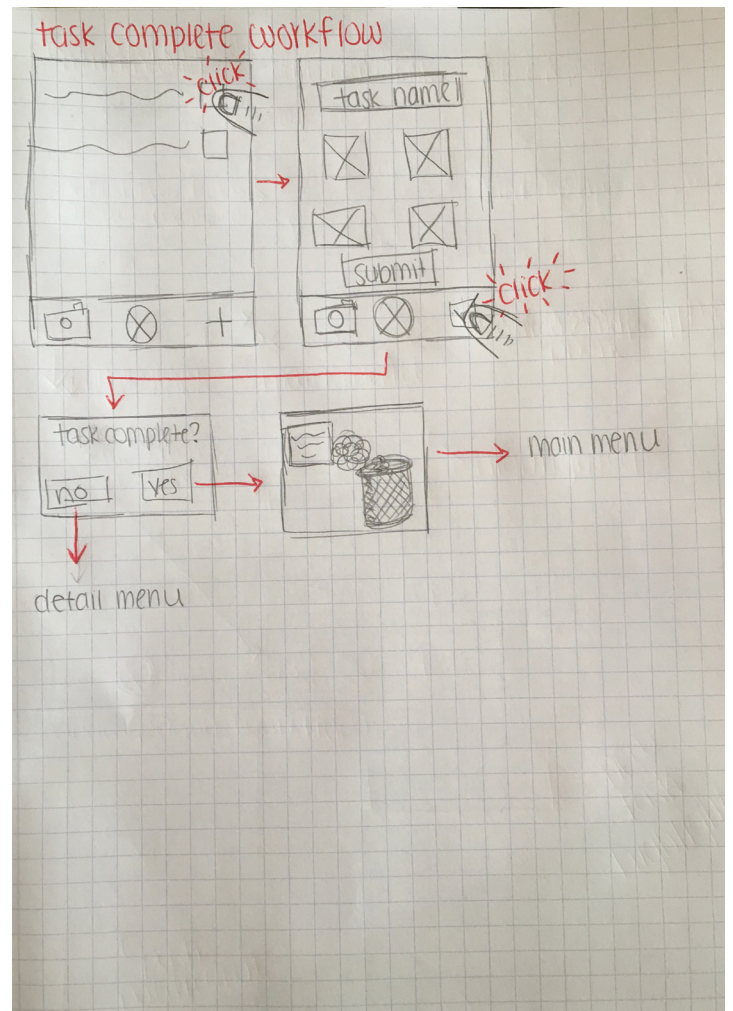

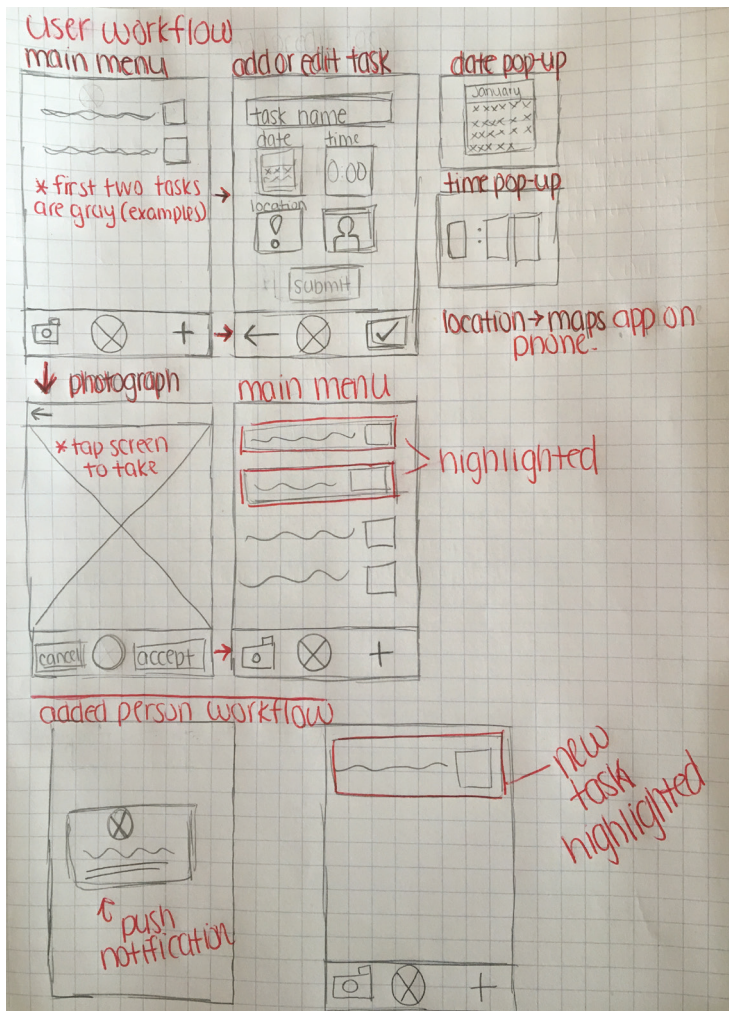

UPDATES:

After my critiques, I changes my workflow to be more simple. Instead of going through an entire photographed list and add the features, the new features will be added to the top of the to-do list.

The pop-up for the maps will now just be your phone map instead of having some reflection to ReminderX in it.

Note: You do not have to add all the details immediately, you can go back and add them when necessary.

WIREFRAMES

UPDATES CONT.:

If you do not have the app, you will still get a notification through text or email saying that you were added to a task. The user can add you through name or phone number.
